Education

Universidad Autónoma de Baja California — B.S. in Computer Engineering, expected June 2027

Projects

Invoice Generator API

A multi-tenant backend platform for creating, managing, and exporting invoices for multiple clients and businesses.

- Built with FastAPI, PostgreSQL, SQLAlchemy, Alembic, JWT authentication, and WeasyPrint PDF generation.
- Implemented tenant-isolated data access and maintained 57 automated tests.

Booking Scheduler API

An appointment scheduling system that allows businesses to define availability and clients to reserve open time slots across time zones.

- Developed with FastAPI, PostgreSQL, Neon, and JWT-based business authentication.
- Used a PostgreSQL exclusion constraint to prevent overlapping bookings at the database level.

Gamified Task Manager

A full-stack productivity application where users complete tasks, collaborate, and earn rewards for use in a virtual store.

- Built with React, Vite, FastAPI, SQLAlchemy, and WebSockets.
- Added user accounts, comments, invitations, task tracking, and real-time synchronization through a custom connection manager.

Contact Form Backend

A reusable backend service for processing website contact submissions and filtering unwanted or suspicious messages.

- Developed with FastAPI and automated spam-detection logic.
- Designed for lightweight integration into small-business websites.

Technical Skills

Languages: Python, JavaScript, Java, C, SQL, Assembly

Backend: FastAPI, Node.js, REST APIs, JWT, WebSockets

Frontend: React, Vite, HTML, CSS

Databases: PostgreSQL, MySQL, SQLite, SQLAlchemy, Alembic

Tools: Git, GitHub, Linux, VS Code

Additional

Certifications: HackerRank Python, SQL, Problem Solving; Kaggle Python, Pandas

Languages: Spanish native; English professional working proficiency
